Notes:

I'm currently studying various programming languages following tutorials on Udemy and YouTube, and reading the language documentation. Learning programming is a hobby for me.

I currently have a full-time job. I have no intention of changing careers at the moment. My intention is to try to monetize my hobby, make an extra income / side hustle. I'm available to work afternoons and weekends.

Professionally I develop PLC software for the company I currently work for. I have never developed professional software for any other programming languages other than PLC.

In a few of my previous jobs, and while I was in school, I have fixed other people's software products in languages like Assembly Language, C++, and Java.
